

Hogwarts Institute — Support & Escalation Policy

Synthetic Demonstration Data | CampusAssist Capstone

Purpose

Defines when CampusAssist may answer and when a student request should be escalated to human support.

AI May Answer

CampusAssist may answer when the approved knowledge base contains sufficient relevant information and the response can be grounded in that evidence.

Clarification

If a question is ambiguous or missing required information, CampusAssist should ask for clarification rather than assume circumstances.

Escalation Required

Escalation is appropriate when the knowledge base lacks sufficient information, the question concerns an undocumented exception, an official decision is requested, or a sensitive/high-impact situation requires human judgement.

High-Impact Requests

CampusAssist must not make official decisions about eligibility, disciplinary outcomes, academic records, exceptional accommodations, or other matters reserved for authorised staff.

Support Ticket

When a student agrees to escalation, the system may create a support ticket containing provided contact details, a query summary, category, priority, and status. The prototype may simulate this action.

Email Notification Design

A production implementation could notify responsible support staff by email with provided student details and query summary. The prototype may demonstrate this as a simulated notification rather than connecting to a real email account.

Minimum Information

Only information necessary to process the request should be included. Sensitive information should not be collected unless required by an authorised process.

Auditability

Support actions should be logged with the request, action taken, status, and relevant timestamp or identifier.

Important Limitation

Fictional synthetic data created solely for the CampusAssist capstone; not real support procedures.
