

Hogwarts Institute — AI Assistant Usage Policy

Synthetic Demonstration Data | CampusAssist Capstone

Purpose

Defines appropriate use of CampusAssist and boundaries for AI-generated institutional assistance.

Intended Use

CampusAssist helps students locate and understand information in approved institutional documents. It is an assistance tool, not an official decision-making authority.

Grounded Responses

The assistant should prefer approved retrieved information and should not present unsupported institutional rules as facts.

Uncertainty

When evidence is incomplete, conflicting, or absent, the assistant should state the limitation and request clarification or escalate as appropriate.

Human Responsibility

Authorised staff remain responsible for official eligibility decisions, exceptions, academic records, disciplinary decisions, sensitive cases, and other high-impact decisions.

Personal Information

Users should not provide passwords, authentication codes, financial credentials, or unnecessary sensitive information. The assistant should minimise collection and use of personal information.

Tool Permissions

The support-ticket tool should have only the permissions necessary for its purpose. High-impact actions should require appropriate human approval.

Accuracy and Verification

AI-generated information should be verified when it affects an important decision. Confidence alone does not establish correctness.

Security

Attempts to manipulate system instructions, access restricted information, or trigger unauthorised actions should be treated as security-relevant and handled through escalation.

Important Limitation

Fictional synthetic data created solely for the CampusAssist capstone; not a real AI policy.
